N2 - Drug Pressure Plan

Callum Malcolm

2023-05-18

Day-2 - Friday 19-05-2023

1. Seed Feeders Note: Add 2ml of 4.8x10⁴ feeder cells / mL cell suspension to each well of 9x 6-well plates

Day 0 - Satuday 20-05-2023

- 1. Count N2-Barcode cells and dilute cell suspension to $5x10^5$ cells/ml
- 2. Add 1mL of cell suspension/well

Note: Thermofisher indicates that 1.2×10^6 cells in a 6 well plate is "confluent" and recommends seeding density of 0.3×10^6 . Seeding 0.5×10^6 means that after 2 days if dividing normally cells should be close to confluent while adding in extra cells to support those in higher concentrations of drug.

- 3. Make 1μ M working stock of each drug
 - Doxorubicin: $1\mu L$ 10mM stock in 10mL media
 - Methotrexate: 1μ L 10mM stock in 10mL media
 - Vincristine: 333.33μ L 30mM stock in 10mL media

Day 2 - Monday 22-05-2023

- 1. Visually check cells for viability
- 2. Count wells which are growing and split back if overconfluent $(>1.0 \times 10^6 \text{ cells})$
- 3. Replenish drug media

- Collect and spin down supernatant

 Note Add associated drug media to wells while supernatant is being spun down as cells are still attached
 to fooders.
- Resuspend in associated drug media **Note** Repeat drug dilutions from Day 0 except do not make Dil 1 2x [final]

Day 3 - Tuesday 23-05-2023

- 1. Seed 9x 6-well feeders
- 2. Seeding density: Add 2ml of $4.8x10^4$ feeder cells / mL cell suspension to each well

Day 4 - Wednesday 24-05-2023

Collection Day 1

- 1. Homogenize each well thoroughly
- 2. Take 1/2 of cell suspension for RNA extraction
 - a. Spin down for 5 min at $250 \times g$
 - b. Snap freeze in liquid nitrogen
- 3. Reseed remaining 1/2 of cell suspension
 - a. Count cell suspension
 - b. Reseed 0.5×10^6 cells/well (or remaining amount if less than 500K)

Day 6 - Friday 26-05-2023

- 1. Visually check cells for viability
- 2. Count wells which are growing and split back if overconfluent (>1.0x 10^6 cells)
- 3. Replenish drug media
- Collect and spin down supernatant
 - **Note:** Add associated drug media to wells while supernatant is being spun down as cells are still attached to feeders
- Resuspend in associated drug media

 Note Repeat drug dilutions from Day 0 except do not make Dil 1 2x [final]

Day 7 - Saturday 27-05-2023

Note: This can be done Friday 1. Seed 9x 6-well feeders 2. Seeding density: Add 2ml of $4.8x10^4$ feeder cells / mL cell suspension to each well

Day 8 - Sunday 28-05-2023

Collection Day 1

- 1. Homogenize each well thoroughly
- 2. Take 1/2 of cell suspension for RNA extraction
 - a. Spin down for 5 min at 250 x g

- b. Snap freeze in liquid nitrogen
- 3. Reseed remaining 1/2 of cell suspension
 - a. Count cell suspension
 - b. Reseed 0.5×10^6 cells/well (or remaining amount if less than 500K)

Day 10 - Tuesday 30-05-2023

- 1. Visually check cells for viability
- 2. Count wells which are growing and split back if overconfluent $(>1.0 \times 10^6 \text{ cells})$
- 3. Replenish drug media
- Collect and spin down supernatant

Note: Add associated drug media to wells while supernatant is being spun down as cells are still attached to feeders

• Resuspend in associated drug media

Note: Repeat drug dilutions from Day 0 except do not make Dil 1 2x [final]

Day 12 - Thursday 1-06-2023

- 1. Homogenize each well thoroughly
- 2. Collect entire cell suspension for RNA extraction
 - a. Spin down for 5 min at $250 \times g$
 - b. Snap freeze in liquid nitrogen
